DETAILED ACTION

Election/Restrictions

The examiner withdraws the restriction requirement made on 11-8-06 and offers the following new restriction requirement:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a method of forming solder joints, classified in class 228, subclass 178.
- II. Claims 17-20, drawn to a circuit assembly, classified in class 174, subclass 257.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the joints in the invention of group II could be heated to a temperature less than 217° C as opposed to the heating to a temperature between 217 °C and 260° C as claimed in the invention of Group I.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1725

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

**IF APPLICANT ELECTS GROUP I, THEN APPLICANT MUST ADDITIONALLY
ELECT ONE OF THE FOLLOWING:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Ia. Claims 2 and 10 are drawn to a first lead free composition.
- Ib. Claims 3 and 11 are drawn to a second lead free composition.
- Ic. Claims 4, 5, 12, and 13 are drawn to a lead containing solder.
- Id. Claims 6, 7, and 14 are drawn to the temperature ranges.
- Ie. Claims 8, and 15 are drawn to a configuration having no distinct regions.
- If. Claims 16 are drawn to a configuration of substantially oblate ellipsoid shape.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 9 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1725

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Ira Blecker on 1-22-07 to request an oral election to the above restriction requirement, but did not result in an election being made.
